Published March 31, 2004

**Abstract.** Palaearctic and Oriental species of the genus *Oiceoptoma* Leach, 1815 are revised. The following new combination is proposed: *Oiceoptoma nakabayashii* (Miwa, 1937) (from *Silpha* Linnaeus, 1758). *Thanatophilus thoracicus* var. *davidi* Portevin, 1903 is treated as a junior subjective synonym of *O. subrufum* (Lewis, 1888). Lectotype and paralectotypes for *Silpha nigropunctata* Lewis, 1888 and *S. subrufa* Lewis, 1888 are designated. The genus *Isosilpha* Portevin, 1920 is confirmed as a junior subjective synonym of *Oiceoptoma* Leach, 1815. Species diagnoses for all six so far known species of *Oiceoptoma* are provided, all species are keyed, male genitalia and habitus are illustrated, and distribution of all species is summarized and material from eastern Palaearctic region is mapped. New distributional records are reported for *O. hypocrita* (Portevin, 1903) (India: Uttaranchal and Himachal Pradesh states, China: Xizang autonomous region and Shaanxi province, and Myanmar), *O. picescens* (Fairmaire, 1894) (China: Yunnan province) and *O. subrufum* (Lewis, 1888) (China: Shaanxi and Zhejiang provinces, Nei Mongol autonomous region and Beijing municipality).

**Taxonomy, synonymy, lectotype designation, Coleoptera, Silphidae, *Oiceoptoma*, *Isosilpha*, Palaearctic region, Oriental region**

### INTRODUCTION

The genus *Oiceoptoma* is Holarctic in distribution: three species are Nearctic (Hatch 1928, Anderson & Peck 1985, Peck & Kaulbars 1987), the rest Palaearctic and partially also Oriental. Only one species (*O. thoracicum* (Linnaeus, 1758)) is Transpalaearctic and a further three to four species are found in the eastern Palaearctic region and the northern Oriental region (Portevin 1926, 1943, Hatch 1928, Miwa 1937). Until recently, the Asian monospecific genus *Isosilpha* (*I. hypocrita*) was treated as valid. Just recently, Peck (2001) listed it, without any detailed discussion, as junior subjective synonym of *Oiceoptoma* (based probably on an unpublished catalogue and the opinion of A. F. Newton, Jr.).

In the present paper, the Palaearctic species of the genus are revised and six species are recognised. The main aim of this paper is to provide diagnoses of the species (including male genital characters, figured for most of the species for the first time), present a serviceable key for their determination and summarize the distribution of individual species in the eastern Palaearctic region and the northern Oriental region (based on records of more than 1200 specimens studied or provided by other specialists).

### MATERIAL AND METHODS

Material for this study came from the following museums and private collections (acronyms according to Arnett et al. 1993): BMNH – Natural History Museum, London (M. J. D. Brendell); DEIC – Deutsches Entomologisches Institut, Müncheberg (L. Zerche); HNHM – Magyar Természettudományi Múzeum, Budapest (O. Merkl); ISNB – Institut royal

des sciences naturelles de Belgique, Bruxelles (D. Drugmand); JHAC – private collection of J. Háva, Praha; JMPC – private collection of J. Mašek, Žlutice, Czech Republic; JRUC – private collection of J. Růžička, Praha; JSCC – private collection of J. Schneider, Praha; KHAC – private collection of K. Harusawa, Osaka-sayama, Japan; MNIC – private collection of M. Nishikawa, Ebina, Japan; MNHN – Muséum national d'Histoire naturelle, Paris (Nicole Berti); MPEC – private collection of M. Perreau, Paris; MSCC – private collection of M. Schülke, Berlin; MTRC – private collection of M. Trýzna, Děčín; MULC – private collection of M. Ulyshen, Athens, Georgia, USA; NHMT – Natural History Museum, Hannam University, Taejon, Korea (Y. B. Cho); NHMW – Naturhistorisches Museum, Wien (H. Schönmann); NMPC – Národní Museum, Praha (J. Jelínek); NSMT – National Science Museum, Tokyo (S. Nomura); SBPC – private collection of S. B. Peck, Ottawa; SMFD – Forschungsinstitut Senckenberg, Frankfurt am Main (Andrea Vesmanis, D. Kovac); SMNS – Staatliches Museum für Naturkunde, Stuttgart (W. Schwaller); SMTD – Staatliches Museum für Tierkunde, Dresden (O. Jäger); WBAC – private collection of W. Barries, Wien; ZMHB – Zoologisches Museum der Humboldt-Universität, Berlin (M. Uhlig).

Each specimen designated a lectotype or paralectotype bears a red printed label “LECTOTYPUS [or] PARALECTOTYPUS, (male symbol) [or] (female symbol), [Name of a taxon], Jan Růžička, Jiří Háva & Jan Schneider des. 1999”. The lectotype and paralectotypes are designated in order to stabilize the nomenclature in this group, according to the Article 74.7.3 of the Code (ICZN 1999).

Following abbreviations are used throughout the text: coll. – collection of, det. – determined by; env. – environs, mt. – mountain, mts – mountains, reg. – region, vill. – village. Exact label data are cited only for the type material, separate lines on labels are indicated by “/”, separate labels by “//”. Author’s remarks and comments are found in square brackets. [p] – the preceding data was printed; [h] – the same was hand-written; [illeg.] – follows illegible data.

If not otherwise mentioned, all material was identified or reviewed by J. Růžička, J. Háva and/or J. Schneider. The non-type material examined for each species is reported in Appendix. If coordinates are missing on the locality label, approximate values are given within square brackets after the name of identified localities and these data were used to prepare the distributional maps. For each species, localities within separate states/regions are sorted chronologically, and larger geographical units are ordered from west to east and from north to south in Appendix.

## RESULTS

### *Oiceoptoma* Leach, 1815

*Oiceoptoma* Leach, 1815: 89 (type species *Silpha thoracica* Linnaeus, 1758, by monotypy).

*Oeceoptoma*: Agassiz 1847: 256, 257 (unjustified emendation of *Oiceoptoma*).

*Isosilpha* Portevin, 1920: 398 (type species *Eusilpha hypocrita* Portevin, 1903, by original designation) (synonymy by Peck 2001: 270).

**DIAGNOSIS.** Small to medium-sized species (body length 12.1–16.2 mm) with distinct habitus (Figs 10–15), dorsoventrally flattened and rounded body, orange and/or black in colour. Head with short row of long erect setae behind eyes, elytral shoulders with tooth (Anderson & Peck 1985, Peck 2001).

**TAXONOMIC NOTES.** (1) The name *Oeceoptoma*, introduced by Agassiz (1847), is treated by Madge (1980) as an unjustified emendation of *Oiceoptoma* Leach, 1815. (2) The genus *Isosilpha* Portevin, 1920 was described for the single species, *I. hypocrita* (Portevin, 1903), from China and Sikkim (Portevin 1920). The characters provided in the generic diagnosis are not consistently different from those of *Oiceoptoma* Leach, 1815.

Portevin (1926: 117) further commented on the differences between these genera – namely, mentioned the larger tooth on elytral shoulders, pronotum without setation and three-segmented antennal club in *I. hypocrita* (vs. pronotum with setation and four- to five-segmented antennal club in *Oiceoptoma*). In fact, other species of *Oiceoptoma* have a distinct tooth on elytral shoulders and the pronotum of *I. hypocrita* is covered with short, black setation. Also the antennal club in this species is four-segmented, as in other *Oiceoptoma* species (Figs 20, 21).

Peck (2001) recently treated the genus name *Isosilpha* Portevin, 1920 as a junior subjective synonym of *Oiceoptoma* Leach, 1815, which opinion is followed here.

**BIONOMICS.** Both larvae and adults of *Oiceoptoma* are generally associated with decaying animal and plant remains and rotten fungi, excrement and slime fluxes, oozing from tree trunks (Portevin 1926,

Šustek 1981, Nikolaev & Kozminykh 2002). *Oiceoptoma thoracicum* is repeatedly observed in central Europe in association with fruiting body of *Phallus* (Basidiomycetes: Phallaceae) (Šustek 1981; J. Růžička unpubl.).

### Key to Palaearctic species of *Oiceoptoma*

- 1 Body uniformly black. Elytra almost round together with wide elytral epipleura, internal costae indistinct (Figs 10, 16). Penis with developed subapical lateral lobes (Figs 1, 2) (northern India, southern and central China, Nepal to Myanmar). .... *O. hypocrita* (Portevin)
- Body uniformly piceous to orange or black with orange pattern on pronotum. Elytra subparallel with narrow elytral epipleura, internal costae distinctly developed (Figs 11–15). Penis with simple apex, without subapical lobes (Figs 3–9). .... 2
- 2 Pronotum covered by long, orange setation; surface of elytra with patchy velvety pattern, surface-ripened fields (Figs 15, 19). Aedeagus with robust paramere and penis with elongate, robust apex (Fig. 9) (Europe to Japan). .... *O. thoracicum* (Linnaeus)
- Pronotum covered by very short, orange and/or black setation; surface of elytra simple (Figs 11–14, 17, 18). Aedeagus with slender paramere and penis with variable, short and slender apex (Figs 3–8). .... 3
- 3 Pronotum black with orange lateral margins (Fig. 12) (Taiwan). .... *O. nakabayashii* (Miwa)
- Pronotum piceous to orange (Figs 11, 13, 14). .... 4
- 4 Pronotum and elytra uniformly piceous to orange (brownish in old collection specimens); pronotum with a compact median spot (Fig. 13). Penis regularly tapering to triangular, sharp apex (Fig. 5) (China: Sichuan and Yunnan provinces). .... *O. picescens* (Fairmaire)
- Pronotum orange; elytra darker, brown to black (Figs 11, 14). .... 5
- 5 Pronotum with four black, glossy punctures, arranged in trapezoidal pattern (Fig. 11). Elytra black, with simple surface (Fig. 18). Penis gradually tapered to slender, sharp apex (Fig. 4) (Japan). .... *O. nigropunctatum* (Lewis)
- Pronotum with diffuse median spot (usually composed of several scattered darker spots or almost indistinct, Fig. 14). Elytra brown to black (rarely light brown), subapical surface with rugosities (as on Fig. 17). Penis subapically laterally sinuous, tapering to a widely rounded apex (Figs 7, 8) (central and north-eastern China, Far East of Russia, Korea to Japan). .... *O. subrufum* (Lewis)

### *Oiceoptoma hypocrita* (Portevin, 1903)

(Figs 1, 2, 10, 16, 20)

*Eusilpha hypocrita* Portevin, 1903: 332 (type locality: “Mou-Pin”).

*Iosilpha hypocrita*: Portevin 1920: 398.

*Oiceoptoma hypocrita*: Peck 2001: 270.

TYPE MATERIAL. Holotype male (MNHN), labelled “MUSEUM PARIS / MOU-PIN [= Baoxing, Sichuan province, China; ca. 30°22'N 102°49'E] / A. DAVID [leg.] 1870 [p] // Moupin / David [hw] // TYPE [p, red characters] // Holotypus [p, violet label]”.

DIAGNOSIS. Body uniformly black (Fig. 10). Pronotum distinctly transverse and deeply sinuate postero-laterally; surface covered with short, black setation. Elytra flat, together almost round (Fig. 10), with wide elytral epipleura; surface simple, without rugosities, internal costae almost invisible (Figs 10, 16). Male. Paramere slender, penis regularly tapering to a wide apex with subapical lateral lobes (Figs 1, 2). Female. Apex of elytron distinctly prolonged to a slender tip.

MEASUREMENTS (n = 25 specimens). Total body length 12.1–15.9 (mean 14.3) mm. Pronotum 1.86–2.00 (mean 1.93) times as wide as long. Elytra 1.05–1.33 (mean 1.20) times as wide as long.

TAXONOMIC NOTE. Peck (2001) treated the monotypic genus *Iosilpha* Portevin, 1920 as a junior subjective synonym of *Oiceoptoma* Leach, 1815. The type species of *Iosilpha*, *I. hypocrita* (Portevin, 1903), is consequently transferred to *Oiceoptoma*.

DISTRIBUTION (Fig. 22). India: Uttarakhand state (first record), Himachal Pradesh state (first record), Sikkim (Portevin 1920); China: Xizang autonomous region (first record), Sichuan province (Portevin

1903, Růžička & Schneider 1996), Yunnan province (Růžička & Schneider 1996), Shaanxi province (first record); Nepal (Emetz & Schawaller 1975, Schawaller 1982), Bhutan (Schawaller 1982) and Myanmar (first record).

***Oiceoptoma nakabayashii* (Miwa, 1937) comb. nov.**  
(Figs 3, 12, 17)

*Silpha (Oiceoptoma) nakabayashii* Miwa, 1937: 244 (type locality “Tompo on Mt. Niitaka in Taichū district”).

TYPE MATERIAL. Not examined.

DIAGNOSIS. Body black, with lateral portions of pronotum orange (Fig. 12). Pronotum moderately transverse and weakly sinuate postero-laterally; surface covered with short setation (black on disc and orange laterally). Elytra subparallel, with narrow elytral epipleura; surface simple, subapically with rugosities (Figs 12, 17), costae fully developed. Male. Paramere slender, penis subapically constricted, tapering suddenly to slender apex (Fig. 3). Female. Apex of elytron weakly prolonged, elytra rounded (Fig. 12).

MEASUREMENTS (n=2 specimens). Total body length 13.3 and 13.4 mm. Pronotum 1.77 and 1.81 times as wide as long. Elytra 0.92 and 1.03 times as wide as long.

TAXONOMIC NOTE. In the original description of this species, *Oiceoptoma* was treated only as a subgenus of *Silpha* Linnaeus, 1758. Because *Oiceoptoma* is treated as a separate genus in this paper, a new combination is proposed for *O. nakabayashii* (Miwa, 1937).

DISTRIBUTION (Fig. 23). Known only from Taiwan (Miwa 1937). The records of *O. thoracicum* from “Formosa” [=Taiwan], given by Portevin (1914, 1926), Hatch (1928) and Miwa (1931) probably refer to *O. nakabayashii*.

***Oiceoptoma nigropunctatum* (Lewis, 1888)**  
(Figs 4, 11, 18)

*Silpha nigropunctata* Lewis, 1888: 9 (type locality: “Nikko, Miyanoshita, and Samegai”).

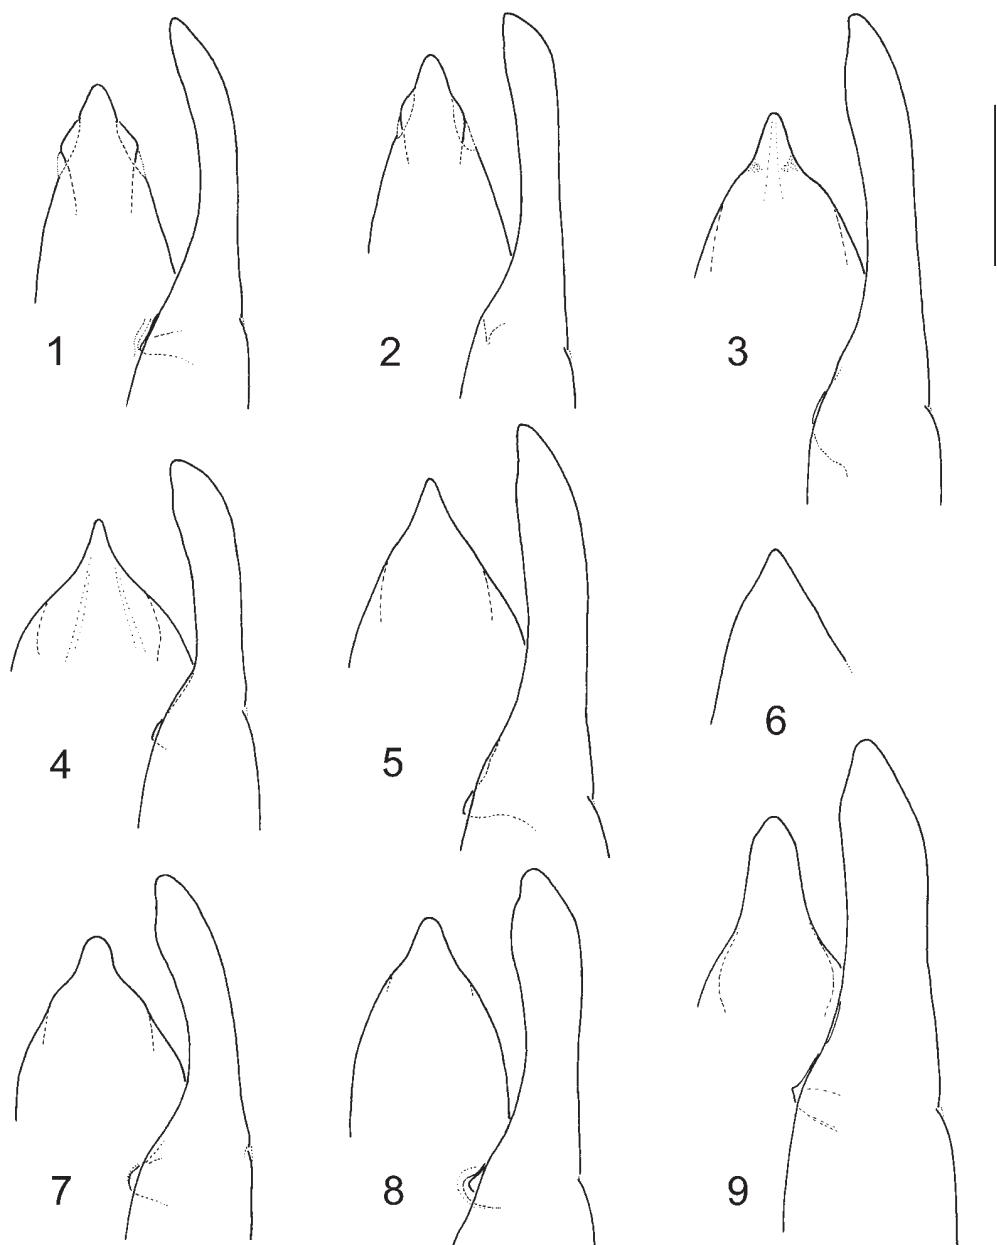

*Oiceoptoma nigropunctatum*: Portevin 1914: 222.

TYPE MATERIAL. Lectotype male (BMNH, here designated), labelled “SYN- / TYPE [p, round label with light blue margin] // Japan / G. Lewis. / 1910-320 [p] // Miyanoshita. [p] // nigropunctata Lewis [hw, Lewis’s manuscript]”; paralectotype female (BMNH), labelled ditto, except “Silpha / nigropunctata / Lewis. [hw, Lewis’s manuscript]”; paralectotype female (BMNH), labelled “SYN- / TYPE [h, round label with light blue margin] // Nikko. [p] [Honshu, Japan; ca. 36°45’N 139°37’E] // Japan. / G. Lewis. / 1910-320. [p] // Silpha / nigropunctata / Lewis. [hw, Lewis’s manuscript]”; paralectotype male (BMNH), labelled “SYN- / TYPE [p, round label with light blue margin] // Japan. / G. Lewis. [p] // Sharp Coll. / 1905-313. [p] // Silpha / nigropunctata / Lewis. [hw, Lewis’s manuscript]”.

DIAGNOSIS. Body black with orange pronotum (Fig. 11). Pronotum moderately to distinctly transverse, weakly sinuate postero-laterally; surface covered with short orange setation. Pronotal disc medially with four black, glossy punctures, arranged in symmetrical, trapezoidal pattern (Fig. 11). Elytra subparallel, with narrow elytral epipleura; surface simple (Fig. 18), costae fully developed. Male. Paramere slender, penis gradually tapering to slender, sharp apex (Fig. 4). Female. Apex of elytron weakly prolonged, elytra rounded (Fig. 11).

MEASUREMENTS (n=10 specimens). Total body length 12.3–14.9 (mean 13.5) mm. Pronotum 1.78–1.97 (mean 1.88) times as wide as long. Elytra 0.99–1.18 (mean 1.08) times as wide as long.

DISTRIBUTION (Fig. 23). Endemic species of Japan, known from Honshu, Shikoku and Kyushu (Lewis 1888, Portevin 1914, Kamimura et al. 1964, Kurosawa 1985, Satō & Saito 1989).

Figs 1–9. Apex of penis and right paramere, dorsal view: 1 – *Oiceoptoma hypocrita* (Portevin) (China: Sichuan province, 20 km N Sabdê; JRUC), 2 – *O. hypocrita* (Portevin) (holotype; MNHN), 3 – *O. nakabayashi* (Miwa) (Taiwan: Kaohsiung hsien, Peinantashan trail; JRUC), 4 – *O. nigropunctatum* (Lewis) (lectotype; BMNH), 5 – *O. picescens* (Fairmaire) (China: Sichuan province, 20 km N Sabdê; JRUC), 6 – *O. picescens* (Fairmaire) (holotype, penis damaged; MNHN), 7 – *O. subrufum* (Lewis) (lectotype; BMNH), 8 – *O. subrufum* (Lewis) (holotype of *Thanatophilus thoracicus* var. *davidi* Portevin; MNHN), 9 – *O. thoracicum* (Linnaeus) (Czech Republic: Alber; JRUC). Scale 2 mm.

***Oiceoptoma picescens* (Fairmaire, 1894)**  
(Figs 5, 6, 13)

*Silpha picescens* Fairmaire, 1894: 217 (type locality: “Se-Pin-Lou-Chan, Thibet”).  
*Oiceoptoma picescens*: Portevin 1926: 149.

TYPE MATERIAL. Holotype male (MNHN), labelled “Se Pin-Lou Chan [= path between Ya'an and Kangding, Sichuan province, China] / Ya Tcheou [not located] / Chasseurs indigènes [= unknown collectors] / 1893 [p] // MUSÉUM PARIS / 1952 / COLL. R. OBERTHUR [p, light yellow label] // L. Fairmaire / Vudit 1894 [p] // G. J. Arrow / Vudit 1902. [p] // silpha / picescens / typ – ... [illeg.] [hw] // HOLOTYPE [p, red label]”.

DIAGNOSIS. Pronotum and elytra piceous to orange (brown in old collection specimens), ventral surface of body and appendages black (Fig. 13). Pronotum weakly transverse, weakly sinuate postero-laterally; surface with darker, compact median spot; pronotum covered with longer, orange setation. Elytra subparallel, with narrow elytral epipleura; surface simple, subapically with rugosities, costae fully developed. Male. Paramere slender, penis regularly tapering to triangular, sharp apex (Figs 5, 6). Female. Apex of elytron prolonged to sharp angle.

MEASUREMENTS (n = 25 specimens). Total body length 13.9–16.2 (mean 15.3) mm. Pronotum 1.68–1.85 (mean 1.75) times as wide as long. Elytra 0.91–1.17 (mean 1.04) times as wide as long.

TAXONOMIC NOTE. Portevin (1926: 92) mentioned in a note, that he was not able to find any differences between the original description of *Oiceoptoma picescens* and *Oiceoptoma subrufum* (Lewis, 1888). In the catalogue part of his paper (Portevin 1926: 149), he treated *O. picescens* as a possible junior subjective synonym of *O. subrufum*. This was accepted later by Hatch (1928: 91). However, in a short note under *O. davidi*, Portevin (1943: 48) referred to *O. picescens* as a valid species.

DISTRIBUTION (Fig. 23). China: Sichuan province (Fairmaire 1894; this region at the end of 19th century belonged to Tibet) and Yunnan province (first record).

***Oiceoptoma subrufum* (Lewis, 1888)**  
(Figs 7, 8, 14)

*Silpha subrufa* Lewis, 1888: 9 (type locality: “Chiuzenji, Akita, and Sapporo”).

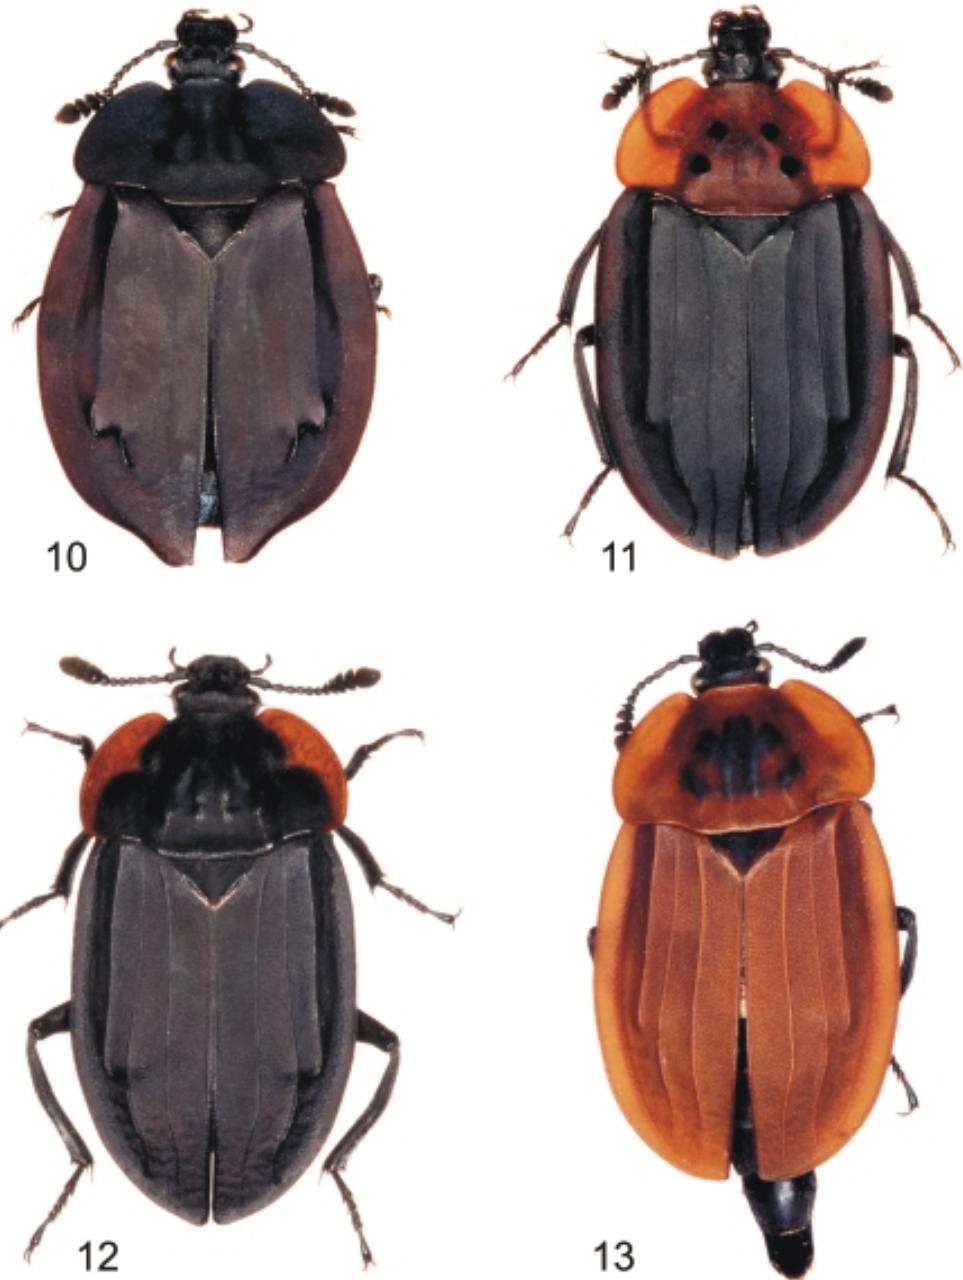

*Oiceoptoma subrufum*: Portevin 1914: 222.

*Thanatophilus thoracicus* var. *Davidi* Portevin, 1903: 331 (type locality: “Jehol, nord de Pékin”), **syn. nov.**

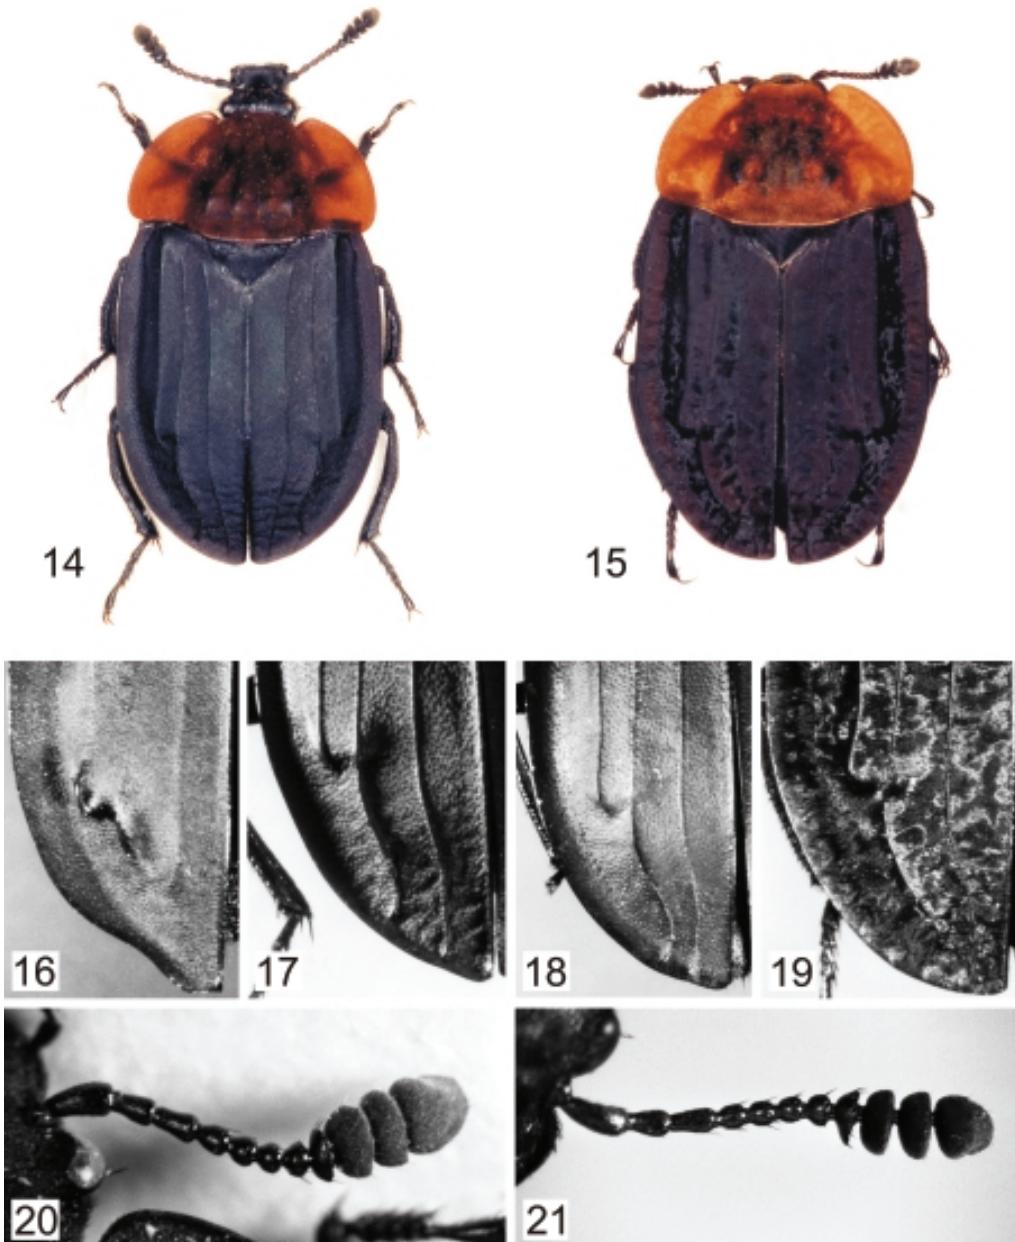

*Oiceoptoma Davidi*: Portevin 1943: 48.

TYPE MATERIAL. Lectotype male of *Silpha subrufa* (BMNH, here designated), labelled “Type [p, round label with red margin] // Japan. / G. Lewis. / 1910-320. [p] // Nikko. [Honshu, Japan; ca. 36°45'N 139°37'E] / 10.VIII.–18.VIII. [18]81. [p] // SYN- / TYPE [p, round label with light blue margin] // Silpha / subrufa / Type. Lewis [hw, Lewis's manuscript]”; paralectotype male and paralectotype female (both BMNH), labelled “SYN- / TYPE [p, round label with light blue margin] // Sapporo. [Hokkaido, Japan; ca. 43°03'N 141°21'E] / 5.VIII.–16.VIII. [18]80. [p] // Japan / G. Lewis. / 1910-320. [p] // Silpha / subrufa / Lewis [hw, Lewis's manuscript]”; paralectotype male (BMNH), labelled “SYN- / TYPE [p, round label with light blue margin] // Japan. / G. Lewis. [p] // Sharp Coll. / 1905-313. [p] // Silpha / subrufa / Lewis [hw, Lewis's manuscript]”; paralectotype male (BMNH), labelled “SYN- / TYPE [p, round label with light blue margin] // [text in Japanese] [p, with pink circle] // Japan. / G. Lewis. / 1910-320. [p] // Subrufa Lewis [hw, Lewis's manuscript]”. Holotype male of *Thanatophilus thoracicus* var. *davidi* (MHNH), labelled “Jehol [p] [territory NE of Beijing, mostly now a part of Hebei province]// MUSEUM PARIS / Nord PEKIN / A. DAVID [leg.] 1865 [p] // 227 / 65 [p, round label] // 1199 [hw] // Gehoe / Geruru [?, illeg.] / David [hw] // TYPE [p, red characters] // HOLOTYPE [p, violet label]”.

DIAGNOSIS. Pronotum orange, elytra brown to black (rarely light brown), ventral surface of body and appendages black (Fig. 14). Pronotum weakly to moderately transverse, weakly sinuate postero-laterally, surface with diffuse median spot (usually composed of several scattered darker spots or almost indistinct, Fig. 14); pronotum covered with longer, orange setation. Elytra subparallel, with narrow elytral epipleura; surface simple, subapically with rugosities (as on Fig. 17), costae fully developed. Male.

Figs 10–13. Habitus, dorsal view: 10 – *Oiceoptoma hypocrita* (Portevin) (female, China: Sichuan province, Emei Shan; JRUC), 11 – *O. nigropunctatum* (Lewis) (female, Japan: Oita prefecture, Mt. Kurodake; JRUC), 12 – *O. nakabayashi* (Miwa) (female, Taiwan: Chiao-Lo-Hu; SMNS), 13 – *O. picescens* (Fairmaire) (male, China: Sichuan province, 20 km N Sabdê; JRUC).

Figs 14–21. 14, 15 – habitus, dorsal view: 14 – *O. subrufum* (Lewis) (female, China: Beijing municipality, Xiaolongmen; JRUC), 15 – *O. thoracicum* (Linnaeus) (male, Czech Republic: Pitkovice; JRUC); 16–19 – apex of left elytron, dorsal view: 16 – *O. hypocrita* (Portevin) (female, China: Sichuan province, Emei Shan; JRUC), 17 – *O. nakabayashi* (Miwa) (female, Taiwan: Chiao-Lo-Hu; SMNS), 18 – *O. nigropunctatum* (Lewis) (female, Japan: Oita prefecture, Mt. Kurodake; JRUC), 19 – *O. thoracicum* (Linnaeus) (male, Czech Republic: Pitkovice; JRUC); 20, 21 – antenna, dorsal view: 20 – *O. hypocrita* (Portevin) (male, China: Sichuan province, Moxi; JRUC), 21 – *O. thoracicum* (Linnaeus) (male, Czech Republic: Kosor; JRUC).

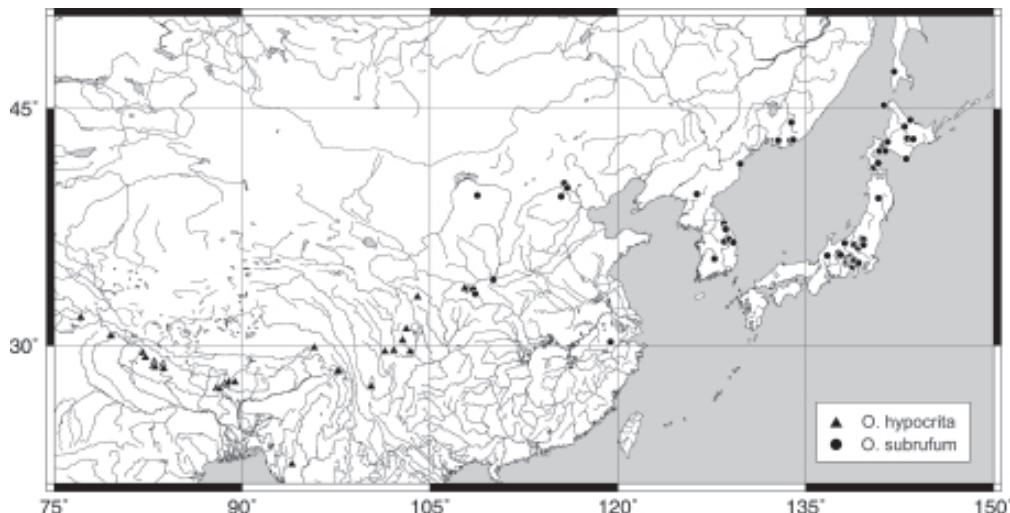

Fig. 22. Distribution of *Oiceoptoma hypocrita* (Portevin) and *O. subrufum* (Lewis).

Paramere slender, penis subapically laterally sinuous, tapering to a widely rounded apex (Figs 7, 8). Female. Apex of elytron weakly prolonged, elytra rounded.

MEASUREMENTS ( $n = 25$  specimens). Total body length 12.1–14.7 (mean 13.4) mm. Pronotum 1.68–1.92 (mean 1.76) times as wide as long. Elytra 1.01–1.28 (mean 1.13) times as wide as long.

TAXONOMIC NOTE. Portevin (1926: 149) treated *Thanatophilus thoracicus* var. *davidi* Portevin, 1903 as a junior subjective synonym of *Oiceoptoma subrufum* (Lewis, 1888). However, in a short note, Portevin (1943: 48) removed this species from synonymy with *O. subrufum*. The study of the types of both taxa confirms its conspecificity, including similar shape of aedeagus (Figs 7, 8). *Thanatophilus thoracicus* var. *davidi* Portevin, 1903 is consequently treated here again as a junior subjective synonym of *Oiceoptoma subrufum* (Lewis, 1888).

DISTRIBUTION (Fig. 22). China: Shaanxi province (first record), Nei Mongol autonomous region (first record), Hebei province (Portevin 1903), Beijing municipality (first record), Zhejiang province (first record); Far East of Russia (Emetz 1977, Lafer 1989); North Korea, South Korea (Cho & Lee 1992, 1995); and Japan: Hokkaido and Honshu (Lewis 1888, Kamimura et al. 1964, Kurosawa 1985, Martin 1989, Satô & Saito 1989). *Oiceoptoma subrufum* is listed also from “Tibet” (Wu 1937), which is probably based on a misidentification of *O. picescens*.

### *Oiceoptoma thoracicum* (Linnaeus, 1758) (Figs 9, 15, 19)

*Silpha thoracica* Linnaeus, 1758: 360 (type locality “Europa”).

*Oiceoptoma thoracicum*: Leach, 1815: 89.

*Oiceoptoma collaris*: Motschulsky, 1859: 491 (nomen nudum).

*Oiceoptoma Golowatschowii* Lindermann, 1865: 148 (type locality “Gouvernement Orel” and “Reval (Katharinenthal)”) (synonymy by Portevin 1926: 149).

TYPE MATERIAL. Not examined.

DIAGNOSIS. Body black with orange pronotum (Fig. 15). Pronotum weakly to moderately transverse, weakly sinuate postero-laterally; surface with darker, diffuse to indistinct median spot; pronotum cov-

ered with very long, orange setation (arranged in a patchy pattern with fields of differently orientated setae). Elytra subparallel, with narrow elytral epipleura; surface with patchy pattern of velvety, surface-ripened fields (Fig. 19); elytra subapically with rugosities, internal two pairs of costae weakly developed (Fig. 15). Male. Paramere robust, penis subapically constricted, with elongated, robust, sub-pentagonal apex (Fig. 9). Female. Apex of elytron prolonged to distinct tip.

MEASUREMENTS (n = 25 specimens). Total body length 13.4–15.6 (mean 14.5) mm. Pronotum 1.6–1.89 (mean 1.73) times as wide as long. Elytra 0.94–1.11 (mean 1.01) times as wide as long.

TAXONOMIC NOTE. Following Růžička (2002), the name *Oiceoptoma collaris*, introduced by Motschulsky (1859), is treated as nomen nudum.

DISTRIBUTION (Fig. 24). Widely distributed from Europe to Japan (Portevin 1926). In eastern part of Palaearctic region, known from Russia (Emetz 1977, Lafer 1989), Mongolia (Mroczkowski 1966b, Emetz 1975a, b), China: Heilongjiang province (first record) and Jilin province (first record), North Korea, South Korea (incl. Cheju Island) (Mroczkowski 1966a, Cho & Lee 1992, 1995) and Japan: Hokkaido and Honshu (Lewis 1888, Kamimura et al. 1964, Kurosawa 1985, Satô & Saito 1989).

## DISCUSSION

Distribution of the six *Oiceoptoma* species in the eastern Palaearctic region is quite distinct (Figs 22–24): only one species (*O. hypocrita*) occurs in the Himalayan-Tibetan orographic system, in central China (Sichuan and Yunnan provinces) widely overlapping with the endemic *O. picescens*, and on the eastern border is sympatric (but not syntopic) with westernmost records of *O. subrufum* (in Qinling Shan mts, Shaanxi province). Endemic *O. nakabayashii* is restricted to Taiwan. Transpalaearctic *O. thoracicum* overlaps in easternmost continental Asia (north-eastern China, Far East of Russia to Korea) with *O. subrufum*.

More complex is the situation in Japan, where both *O. thoracicum* and *O. subrufum* occur partially in sympatry with the endemic Japanese *O. nigropunctatum*. Both *O. thoracicum* and *O. subrufum* occur on Hokkaido and part of Honshu (east of Biwa-ko lake) (Figs 22, 24); *O. nigropunctatum* is

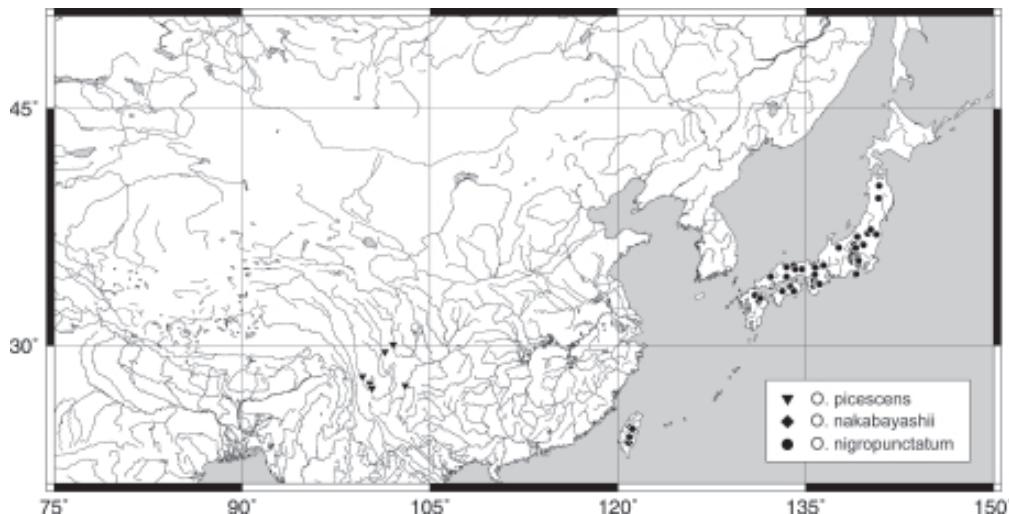

Fig. 23. Distribution of *Oiceoptoma picescens* (Fairmaire), *O. nakabayashi* (Miwa) and *O. nigropunctatum* (Lewis).

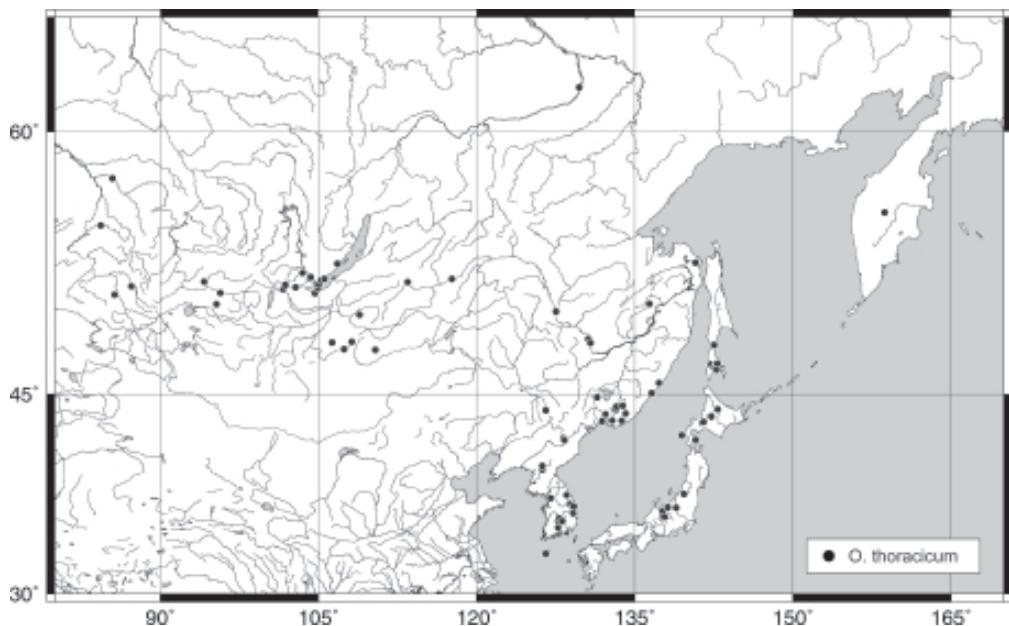

Fig. 24. Eastern Palaearctic distribution of *O. thoracicum* (Linnaeus).

absent on Hokkaido but widely distributed throughout Honshu, Shikoku and Kyushu (Fig. 23). No record of *Oiceoptoma* is known for the Ryukyu Islands.

In the Nearctic region, a further three species are distributed as follows (Anderson & Peck 1985, Peck & Kaulbars 1987): *O. noveboracense* (Forster, 1771) occurs from the Rocky Mountains east to the Atlantic coast and north-eastern United States, where it partially overlaps with *O. inaequale* (Fabricius, 1781), distributed from southern parts of Canada and Quebec south to Florida, and west to east Texas and North and South Dakota. In southern United States, it overlaps with a third species, *O. rugulosum* Portevin, 1903, restricted to south-eastern United States (from coastal North Carolina through Florida to central Texas).

#### A c k n o w l e d g e m e n t s

We are especially grateful to S. Bečvář (České Budějovice), V. Beneš (Praha), L. Bocák (Olomouc), Ludmila Businská and R. Businský (Praha), J. Cooter (Hereford, England), R. Červenka (Praha), R. Dunda (Praha), C. Holzschuh (Villach, Austria), Z. Jindra (Praha), Z. Kleťčka (České Budějovice), D. Král (Praha), V. Kubáň (Brno), J. Mašek (Žlutice, Czech Republic), M. Nikodým (Roztoky u Prahy, Czech Republic), M. Perreau (Paris), A. Plutenko (Smolensk, Russia), S. Pokorný (Praha), R. Sauer (Praha), M. Schülke (Berlin), A. Smetana (Ottawa), M. Snižek (České Budějovice), J. Strejček (Praha), O. Šauša (Bratislava), M. Trýzna (Děčín) and J. Turna (Kostelec na Hané, Czech Republic) who allowed us to study their material of *Oiceoptoma*; and to Nicole Berti (MNHN), M. J. D. Brendell (BMNH), D. Drugmand (ISNB), O. Jäger (SMTD), J. Jelinek (NMPC), D. Kovac (SMFD), O. Merkl (HNHM); W. Schwaller (SMNS), H. Schönmann (NHMW), M. Uhlig (ZMHB), Andrea Vesmanis (SMFD) and L. Zerche (DEIC) who loaned us museum material (including primary type specimens of *Oiceoptoma* from BMNH and MNHN). W. Barries (Wien), K. Harusawa (Osaka-sayama, Japan), H. Hoshina (Fukui, Japan), M. Nishikawa (Ebina, Japan), S. B. Peck (Ottawa) and M. Ulyshen (Athens, Georgia, USA) are thanked for providing distributional data of *Oiceoptoma* specimens in their collections. M. J. D. Brendell (BMNH), Y. B. Cho (NHMT), A. F. Newton (FMNH) and S. Nomura (NSMT) kindly provided detailed records on material deposited in their museums. M. Hoskovec (Praha) made the habitus photographs of all Palaearctic *Oiceop-*

*toma* species. D. Král (Praha) and W. Schawaller (SMNS) kindly commented on earlier drafts of the manuscript. K. Harusawa (Osaka-sayama, Japan) and M. Nishikawa (Ebina, Japan) are thanked for providing unpublished information on the distribution of *Oiceoptoma* species throughout Japan. J. Farkač (Praha), F. Hieke (ZMHB), D. Král (Praha), M. Nishikawa (Ebina, Japan) and A. Smetana (Ottawa) helped with identification of old and dubious localities. L. Zerche (DEIC) helped with the identification of B. von Bodemeyer's historical localities. M. Barclay (BMNH), B. Březina (Praha) and P. Chvojka (NMPC) kindly helped us obtain rare literature.

## APPENDIX

List of examined non-type material of Palaearctic *Oiceoptoma* species

### *Oiceoptoma hypocrita* (Portevin, 1903)

MATERIAL EXAMINED. (34 localities, 263 specimens) **India**: Uttaranchal state: between Badarinath and Govind Ghat [ca. 30°44'N 079°29'E], 2800 m, 9.–11.vii.1994, Valenta leg., 5 males (JSCC); 15 km S Badarinath, 30 km N Joshimath [ca. 30°41'N 079°31'E], 2800 m, 9.–11.vii.1994, M. Snižek leg., 1 female (JRUC); Himachal Pradesh: Kulu distr. [= Kullu, ca. 31°57'N 077°06'E], without date and collector's name, ex Musaeo W. Rothschild, 1 female (BMNH); Sikkim: Gnatang [= Gangtok, ca. 27°20'N 088°37'E], vii.1901, without collector's name, 1 male, 1 female (BMNH); de Padamtsin [= Padamchen, ca. 27°14'N 088°45'E], near Lington, vii.1901, without collector's name, 1 male, 3 females (BMNH); Darjeeling district, Rungbong valley, Gopaldhara [ca. 26°57'N 088°11'E], 1911, W. K. Webb leg., ex coll. H. Stevens, 1 female (BMNH); **China**: Xizang autonomous region: Yatong [= Yadong, ca. 27°26'N 088°55'E], 10500 ft., without date, A. E. Hobson leg., 1 female (BMNH); Bomi env., 29°52'N 095°45'E, 3000 m, 9.–10.vii.1997, J. Turna leg., mixed forest, 3 males, 2 females (JSCC, MTRC); Sichuan province: Gongga Shan mts, Moxi [ca. 29°40'N 102°07'E], 21.–24.vii.1992, J. Schneider leg., 58 spec. (JHAC, JSCC, FMNH; WBAC); Wolong [ca. 31°10'N 103°07'E], 9.–10.viii.1992, J. Schneider leg., 1 female (JSCC); Emei Shan mt. [ca. 29°37'N 103°24'E], vi.1992, R. Sauer leg., 1 male, 1 female (JSCC); same locality, 29.viii.–2.ix.1995, J. Schneider leg., 30 spec. (JSCC, JRUC); same locality, 29.viii.–2.ix.1995, J. Schneider leg., M. Nishikawa det., 2 spec. (MNIC); same locality, 2450 m, 3.–7.vii.1993, M. Trýzna leg., 1 female (MTRC); Emei county, Baoguo [= Baoguosi, ca. 29°35'N 103°25'E], 29.vii.–3.viii.1994, Beneš leg., 1 female (MPEC); Jiuzhaigou env. [ca. 33°20'N 104°00'E], 12.–16.vi.1995, V. Beneš leg., 1 male, 1 female (JSCC); Jiuzhaigou [ca. 33°20'N 104°00'E], 16.vi.1995, V. Beneš leg., J. Zídek det., 4 spec. (FMNH); Gongga Shan mts, Hailuogou Nat. Park, above camp 2, 29°35'N 102°00'E, 2600–2750 m, 3.–6.vii.1998, J. Schneider leg., 1 male, 4 females (JSCC); 20 km N Sabdê, 29°35'N 101°23'E, 3200 m, 10.–16.vii.1998, J. Schneider leg., mixed primary forest near a river, under a dog carrion, 20 males, 17 females (JHAC, JRUC, JSCC); Shaanxi province: Qinling Shan mts, Taibai Shan range above Houshenzi [= Houzhenzi, ca. 33°54'N 107°47'E], 3050 m, 9.vi.–3.vii.1998, J. Martens & P. Jäger leg., W. Schawaller det., 3 females (SMNS); Yunnan province: Yulong Shan mts, Baishui vill., 27°08'N 100°14'E, 2900–3500 m, 7.–12.vii.1990, D. Král leg., 1 female (JRUC); 30 km N Lijiang, Heishui, 27°13'N 100°19'E, 18.vi.–4.vii.1993, S. Bečvář leg., 2 females (JSCC); **Nepal**: Karnali zone: Dolpa district, northern Dhaulagiri, Gompa to Tarakot [ca. 28°53'N 082°59'E], 3300–3400 m, 2.–6.vi.1973, J. Martens leg., W. Schawaller det., 4 males, 10 females (SMNS); same locality, 3300–3400 m, 1.–5.vii.1973, J. Martens leg., W. Schawaller det., 1 male, 14 females (SMFC); same locality, 3300–3400 m, 2.–6.vi.1973, J. Martens leg., W. Schawaller det., 2 spec. (FMNH); Jumla district, 2 km W Gothicaur [ca. 29°11'N 082°17'E], 2700–2800 m, 20.–21.v.1995, M. Hartmann leg., W. Schawaller det., 4 females (SMNS); Muju district, Rara lake [ca.

29°30'N 082°05'E], 3000 m, 27.–29.vi.1995, D. Ahrens leg., W. Schawaller det., 5 males, 5 females (SMTD, SMNS); Rapti zone: Rukum district, Thankur [= Tankur] to Pelma [ca. 28°34'N 082°54'E], 2800–3300 m, v.1973, J. Martens leg., W. Schawaller det., 1 male, 1 female (SMFC); Dhaulagiri zone: Baglung district, Dhaulagiri Himal mts, Dhorpatan [ca. 28°30'N 083°04'E], 3000 m, 9.–13.v.1973, J. Martens leg., W. Schawaller det., 1 male, 4 females (SMFC); same locality, 3000–3200 m, 22.–24.v.1973, J. Martens leg., W. Schawaller det., 3 males, 1 female (SMFC); same locality, 3000–3200 m, 7.–25.v.1973, W. Schawaller det., 1 female (SMFC); Mustang district, Thakkhola, Chadziou – Khola near Ghasa [ca. 28°36'N 083°39'E], 2600 m, vi.–vii.1970, J. Martens leg., W. Schawaller det., 1 male, 1 female (SMFC); Mustang district, Thakkhola, Tukuche – Thangsang [ca. 28°42'N 083°40'E], 3100–3300 m, 1.–5.vii.1973, J. Martens leg., W. Schawaller det., 1 male (SMFC); Parbat district, 40 km NW Pokhara, Gorepani [ca. 28°24'N 083°43'E], 3000 m, 6.–10.v.1984, without collector's name, W. Barries det., 2 spec. (WBAC); Gandaki zone: Kaski district: between Chitre and Ghandrung [ca. 28°25'N 083°42'E], Chitre side of the pass, 2800–2900 m, *Tsuga* and *Rhododendron* forest, 4.–7.v.1980, J. Martens & B. Ausobsky leg., W. Schawaller det., 11 males, 10 females (SMFC, SMNS); Mechi zone: Panchthar district, upper Mai Majuwa Khola, Dhopar Kharka [ca. 26°59'N 087°57'E], 2700 m, 27.–28.viii.1983, J. Martens & B. Daams leg., W. Schawaller det., 1 female (SNMS); not located: Kalapokri, 9000 ft., v.1912, without collector's name, 1 female (BMNH); **Bhutan**: Paro district, Chiley-La [ca. 27°26'N 089°25'E], 21.vi.1988, 3000 m, C. Holzschuh leg., 1 female (JSCC); **Myanmar** (Burma): Seingku valley, 28°07'N 097°35'E, 9500 ft., 7.vi.1926, F. Kingdon Ward leg., 1 female (BMNH); Adung Valley, 8000 ft., 28°15'N 097°40'E, 31.v.1931, F. Kingdon Ward leg., A. Newton det., 1 spec. (FMNH); same locality, 3.vi.1931, F. Kingdon Ward leg., A. Newton det., 1 spec. (FMNH); same locality, 6.vi.1931, F. Kingdon Ward leg., A. Newton det., 1 spec. (FMNH); same locality, 8000–10000 ft., 7.vi.1931, F. Kingdon Ward leg., 3 females (BMNH); Chin hills, Mt. Victoria [ca. 21°26'N 093°59'E], 2400–2800 m, iv.1938, G. Heinrich leg., 1 female (BMNH).

### *Oiceoptoma nakabayashii* (Miwa, 1937)

MATERIAL EXAMINED. (6 localities, 7 specimens) **Taiwan**: Taichung hsien: Hoping [ca. 24°11'N 120°58'E], 14.x.1989, C. C. Chiang leg., W. Schawaller det., 1 female (SMNS); Nantou hsien: Jenai [ca. 24°01'N 121°05'E], Meifeng env., 5.v.1978, T. Niisato leg., M. Nishikawa det., 1 spec. (MNIC); Sungkang [ca. 24°04'N 121°10'E], 9.vii.1988, C.-C. Lo leg., S. Nomura det., 1 spec. (NSMT); Chiayi hsien: Mt. Yushan [ca. 23°28'N 120°57'E], 2.viii.1974, Y. Kiyoyama leg., S. Nomura det., 2 spec. (NSMT); Kaohsiung hsien: Peinantashan trail [ca. 23°03'N 120°51'E], 2250 m, 4.vii.1993, A. Smetana leg., broadleaved evergreen forest with *Chamaecyparis*, rotten fungi on fallen log, 1 male (JRUC); not located: Chiao-Lo-Hu, 28.v.2002, Wenbe Hwang leg., W. Schawaller det., 1 female (SMNS).

### *Oiceoptoma nigropunctatum* (Lewis, 1888)

MATERIAL EXAMINED. (84 localities, 249 specimens) **Japan**: Honshu: Fukushima prefecture, Aizu [ca. 37°30'N 139°56'E], without date, K. Nagayama leg., S. Nomura det., 1 spec. (NSMT); Tokyo prefecture, Okutama [ca. 35°49'N 139°07'E], without date, Watanabe leg., S. Nomura det., 1 spec. (NSMT); Saitama prefecture, Chichibu [ca. 36°00'N 139°06'E], 25.v.1929, K. Kamiya leg., S. Nomura det., 1 spec. (NSMT); Tokyo prefecture, Kogesawa, 21.vi.1942, T. Shinohara leg., S. Nomura det., 1 spec. (NSMT); Fukushima prefecture, Mt. Azuma-yama [ca. 37°44'N 140°12'E], 19.vii.1942, Y. Kurosoawa leg., S. Nomura det., 2 spec. (NSMT); Fukushima prefecture, Tateiwa-mura, Yunohana, 17.vi.1947, Y. Kurosoawa leg., S. Nomura det., 1 spec. (NSMT); Fukushima prefecture, Aizu-Wakamatsu-shi, Tenneiji-machi, 22.v.1949, T. Yoneyama leg., S. Nomura det., 1 spec. (NSMT); Fukushima prefecture, Omata-mura, Ebiyama pass, 9.vi.1951, Y. Kurosoawa leg., S. Nomura det., 2 spec. (NSMT); Akita prefecture, Towada-ko lakeside [ca. 40°27'N 140°51'E], 14.vi.1952, K. Shimoyama leg., S. Nomura det., 1 spec. (NSMT); Gunma prefecture, Niiharu-mura, Hoshi Spa – Mikuni-toge pass, 6.vi.1953, Y. Kurosoawa leg., S. Nomura det., 1 spec. (NSMT); Aomori prefecture, Takedate-mura, Nurukawa, 5.vii.1953, K.
